**SIBER SYSTEMS UNVEILS GOODSYNC V6.7, WITH REMOTE BACKUP
USING FTP/WebDAV, AT CES SHOWSTOPPERS 2008**

*Innovation Allows Users to Easily Sync and Store Copies of Files—Even
Entire Hard Drives—At Remote Locations; No Expensive Backup Service Needed*

SHOWSTOPPERS @ CES 2008 / LAS VEGAS — January 7, 2008 — Siber Systems, Inc., a leading productivity provider, today announced GoodSync Version 6.7 at the Showstoppers technology event at the International Consumer Technology Show (CES) 2008 in Las Vegas. As the latest iteration of the top-rated backup and synchronization product for personal computers, GoodSync Version 6.7 now offers support for Web-based transfers via FTP or WebDAV protocols, making it easy to upload and maintain copies of files at distant locations for the ultimate in disaster protection.

GoodSync Version 6.7 has quickly risen to the top of the backup/synchronization utility category due to its dependability, flexibility, speed and one-click operation. The product, which has garnered top ratings from PC World, Computer Shopper, Network World and other well-known publications, supports file synchronization between computers and/or hard drives via USB cable, local networks and the Web.

With the addition of WebDAV and FTP standards, remote backups over the Internet will be faster than ever. Users can now synchronize and backup files or entire disks to remote servers without having to sign up for an expensive backup service provider. What's more, website owners can now utilize GoodSync to upload and maintain website files.

File Transfer Protocol (FTP) and Web-based Distributed Authoring and Versioning (WebDAV) are the most common technologies today for transferring and managing large amounts of file information over the Internet. FTP uses the Internet's TCP/IP protocols for fast data transfer, while WebDAV, an extension to the HTTP protocol, allows users to collaborate on, and even alter, files via the Web.

“FTP and WebDAV are the most popular Internet-based file sharing protocols. Their addition to GoodSync's lineup of transfer standards keeps GoodSync at the forefront of the backup and synchronization field,” said William Carey, vice president of marketing for Siber Systems. “We believe showstoppers attendees, as well as our large user base, will be pleased and impressed by GoodSync's ability to handle the most sophisticated backup challenges.”

Fast Growing Category

With the advent of inexpensive, or even free, online storage providers, PC users have exciting new options for storing, accessing and sharing files securely from virtually any location.

GoodSync complements this fast-growing trend by making it easy and fast to backup and/or synchronize large amounts of information—photos, music, videos, even entire hard drives—over the Web.

Siber Systems Unveils GoodSync V6.7, With Remote Backup Using FTP/WebDAV, At CES Showstoppers 2008—Page 2

GoodSync supports backups to multiple devices and features both one-way and bi-directional synchronization making it easy to update the user's most recent information. Real-time action monitoring, an easy-to-understand tree-based interface, and automatic settings simplify GoodSync's operation, adding to the user's peace of mind.

Pricing, Availability

Siber Systems' GoodSync data backup and synchronization utility is FREE for personal use; a professional version of the product can be purchased for \$19.95 (USD), with Enterprise and OEM pricing available. GoodSync Version 6.7 is now available for download or purchase at www.goodsync.com.

About Siber Systems:

Founded in 1995, Siber Systems creates and markets a wide range of software to both professional programmers and the general public. The company's three best-known products are RoboForm, RoboForm2Go, and GoodSync. RoboForm, a unique password management tool and identity organizer for PCs and mobile devices, has over two million active users worldwide and is available in both consumer and enterprise versions. RoboForm2Go is a portable version of RoboForm that runs directly from USB flash drives combining convenient and secure password management with complete portability. GoodSync is a powerful, yet easy-to-use file backup and synchronization software. The firm also licenses various data parsing, compilation, and transformation products to major technology companies. Headquartered in Fairfax, Virginia, Siber Systems is privately held.
