**MAJOR INTERNATIONAL FINANCIAL INSTITUTION SELECTS  
GOODSYNC ENTERPRISE TO SECURE AND SYNCHRONIZE ITS MOBILE DATA**  
*Popular Utility Becomes Essential Security and Productivity Tool for 6,000 Employees Traveling  
Worldwide; Seamless, Transparent Solution Requires No User Interaction*

**FAIRFAX, VA — (May 4, 2010) —** [Siber Systems](#), Inc., a company dedicated to providing world-class computing productivity software for enterprises and individuals, today announced that one of the world's most prominent financial institutions has selected [GoodSync Enterprise](#) for deployment on laptop PCs used by 6,000 of its traveling employees. Using GoodSync Enterprise, Siber Systems' data backup/synchronization application for businesses, the institution will ensure that all data residing on the laptops are automatically synchronized and readily available.

GoodSync Enterprise is one of the best-known and most reliable solutions for the data issues raised by today's mobile workforce. Unusually flexible, GoodSync Enterprise provides organizations with a simplified and easy way to backup and synchronize employees' important work folders and files automatically between desktops, laptops, servers, mobile devices and external drives.

“Siber Systems is extremely pleased to announce this deployment, one of the largest to date for GoodSync Enterprise,” said Bill Carey, Siber Systems VP of Marketing. “Our efforts over the past few months have convinced this important institution that GoodSync Enterprise has the world-class durability necessary for such an important deployment. We're excited, based on this news, to pursue other large financial and banking institutions as potential GoodSync Enterprise customers.”

GoodSync Enterprise provides a unique combination of easy administration through Active Directory, and a robust and extremely flexible file backup/synchronization technology. The primary purpose of the product in this particular deployment is to automatically and transparently backup files from laptops of traveling employees across the Internet. The secondary purpose is to deliver updated files, such as marketing materials and technical documentation, from centralized locations to employees' laptops.

For this financial industry customer, the benefits of deploying GoodSync are threefold:

- User data is automatically backed up, even while users are on the road;
- Users get all their updates from headquarters automatically, as often as they connect to the Internet

- more -

## Major International Financial Institution Selects GoodSync Enterprise To Secure And Synchronize Its Mobile Data—Page 2

- By allowing the use of Windows environment variables in paths, GoodSync ensures seamless and automatic re-deployment of user data to new hardware that can even have a different version of operating system installed.

GoodSync Enterprise operates in the background and with no performance penalty. “Users will require no direct interaction with the software. In fact most employees won’t even notice it operating,” stated Carey.

GoodSync Enterprise installation and activation can be completed using common software deployment mechanisms. To ensure administrative oversight, the application provides detailed status reports of every action taken. Administrators have access to this log through email alerts as well as from a specified central location.

Siber Systems’ GoodSync Enterprise is offered with volume discounts and is available for [free 30-day evaluation](#). To see a [full list of features](#), to [purchase](#), or for further information, visit [www.goodsync.com/enterprise](http://www.goodsync.com/enterprise).

### ***About Siber Systems:***

*Founded in 1995, Siber Systems creates and markets software products to consumers and businesses around the world. Our software is highly acclaimed and has received numerous awards including PC Magazine Editor’s Choice, CNET’s Best Software of the Year, and PC World’s 25 Products We Can’t Live Without. The company’s flagship products, RoboForm and GoodSync, are used by millions of people worldwide, with registered customers in over 100 countries. GoodSync, an easy and reliable automatic file synchronization program, was released in 2006 and already enjoys favorable reviews from users and the press. RoboForm Enterprise has been solving password management problems quickly, easily and cost-effectively since 1999. RoboForm Enterprise reduces employee passwords to one secure, master password and provides an easy and cost-effective way to improve password security while making employees more productive and helping organizations to recognize immediate IT cost savings. As part of the company’s strong commitment to customer satisfaction, its software comes with a risk-free trial. Headquartered in Fairfax, Virginia, Siber Systems is privately held.*
